

we make logistics simple

we make logistics simple

We make logistics simple

Klinkhammer has been living intralogistics - for more than 50 years

In time for the 50th anniversary, the new building for the new company headquarters of Klinkhammer, including a technical center, is completed creating optimal conditions for further growth of the intralogistics specialist. Over the past five decades, Klinkhammer has not only made a name for itself as a partner for future-proof solutions in the field of automated logistics.

As an IT and digitization specialist, the company sets new standards with its warehouse management software. This enables the company to provide its customers with holistic support, from consulting, logistics planning and complex software applications to complete, turnkey warehouse and order picking systems, the on-schedule commissioning up to the Service24. With a manufacturer-neutral view, Klinkhammer develops the economically most sensible and most effective solution for the customers. We make logistics simple and future-proof.

»Forward-looking solutions require forward-looking planning.«

Frank Klinkhammer

Klinkhammer: Intralogistics general contractor and system integrator

We are your pilot for forward-looking intralogistics

- Logistics planning and consulting
- Intralogistics analysis
- Project planning/realization
- High-bay warehouse
- Small-parts warehouse
- Shuttle systems
- Conveyor technology
- Order picking
- Service24
- System control/visualization
- Warehouse management software
- Retrofit

Innovations are part of our DNA

The optimal interaction of hardware and software

The family business was founded in the year 1972. Adolf Klinkhammer started in the basement of his row house as an engineering office with innovative logistics planning. In 1977 he created a second mainstay with the production and assembly of conveyor technology components and in 1980 moved the young company to Wiesbadener Street. Even then, Klinkhammer not only planned complete central warehouses, but also surprised again and again with new and in-house developments.

Some examples have been and still are a multi-order picking system for fast and slow movers, autonomous pallet shuttles or KlinCAT, the multi-level shuttle for containers. The company looks back to a history full of technology milestones, from logistics planning to electronic control technology and system visualization to GUI-tested software, the digital twin or the use of product innovations such as shuttle robots and robotic piece picking.

»Sometimes you have to swim against the tide in order to find the optimal solution.«

Hagen Schumann

»Only those who understand the present will be able to shape the future.«

Tom Preller

we make logistics simple

Our software KlinkWARE® provides the decisive edge

- Interface & integration
- Control station, statistics & flexboard
- Master data, environmental conditions
- Goods receipt, cross-docking & stock
- Storage & relocation
- Replenishment control & quality assurance
- Order management & order picking
- Services, consolidation & packing
- Dispatch & inventory
- Material flow
- Pick-by-light / -voice
- Stacker terminal

we make logistics simple

Success is work on the detail

We do this with passion and knowledge

Team spirit and individuality

Our employees at Klinkhammer

»Only when the system runs smoothly I am satisfied.«

Di Ye

»What does intralogistics mean to me?«

Most of all passion.«

Marcel Liske

»The most beautiful sound for me is the whirring of a storage and retrieval system.«

Marcel Bierau

»Logistics can also be simple.«

Özcan Boyraz

»You need visions in order to change things.«

Frank Bennemann

Accompany us into the future of intralogistics

We are looking forward to a conversation

Vice President Sales

Facts about our new company headquarters

- 10.5 million euros investment
- 3655 square meters of office and usable space
- Energy efficient office building and modern building materials
- Active underfloor heating for heating and cooling with heat pump
- Sky lounge - winter garden with large roof terrace
- Casino with an outdoor terrace
- Technical center with AI-supported robot technology as test and demonstration center for innovative storage technologies
- Photovoltaic system on the roof of the technical center
